

Charto — Launch Metrics

Three metrics, each with the query that produces it and the result it returns. Read down the left; the right-hand column says what each number is and where it comes from.

2026-07-27 → 2026-08-26 · securities from pivot_db.public.company_identity

WAITLIST REGISTRATIONS	SECURITIES RENDERED	AI CHAT SESSIONS
2,148	4,459	536
30 days · 36 cities	distinct, of 5,019 listed	18,420 render events

The three headline numbers. Each is a single COUNT against its own table — no derived or blended figures. The query below returns all three in one row.

SELECT (SELECT COUNT(*) FROM demo_waitlist)	AS waitlist_registrations,
(SELECT COUNT(DISTINCT symbol)	
FROM demo_security_render)	AS securities_rendered,
(SELECT COUNT(*) FROM demo_security_render)	AS render_events,
(SELECT COUNT(*) FROM demo_chat_session)	AS ai_chat_sessions;

Four scalar sub-selects, one row out. Run it against the database and it returns exactly the tiles above.
sqlite3 charto_demo.db < demo_metrics.sql

WAITLIST_REGISTRATIONS	SECURITIES_RENDERED	RENDER_EVENTS	AI_CHAT_SESSIONS
2,148	4,459	18,420	536

01 Waitlist registrations

SELECT 'Waitlist registrations'	AS metric,
COUNT(*)	AS value,
COUNT(DISTINCT city)	AS cities,
ROUND(100.0 * SUM(activated) / COUNT(*), 1)	AS activation_pct,
DATE(MIN(registered_at), 'unixepoch', '+330 minutes')	AS window_from,
DATE(MAX(registered_at), 'unixepoch', '+330 minutes')	AS window_to,
ROUND(COUNT(*) * 1.0 /	
(JULIANDAY(MAX(registered_at), 'unixepoch')	
- JULIANDAY(MIN(registered_at), 'unixepoch')), 1)	AS per_day
FROM demo_waitlist;	

value is the headline count. activation_pct is the share who went on to use the product, and per_day divides the count by the actual span between the first and last signup rather than by an assumed 30.

METRIC	VALUE	CITIES	ACTIVATION_PCT	WINDOW_FROM	WINDOW_TO	PER_DAY
Waitlist registrations	2,148	36	42.2	2026-07-27	2026-08-26	71.8

2026-W30		754
2026-W31		496
2026-W32		353
2026-W33		363
2026-W34		182

Signups per week. The shape is a launch: a spike, a decay, then a slow lift as referrals compound. Week 34 is short — the window closes mid-week.

WEEK	SIGNUPS	ORGANIC	TWITTER	LINKEDIN	WHATSAPP	REFERRAL	ACTIVATED
2026-W30	754	203	148	110	84	61	334
2026-W31	496	142	98	74	62	43	200
2026-W32	353	86	84	54	51	19	139
2026-W33	363	91	88	50	33	35	158
2026-W34	182	50	40	18	24	17	76

Channel mix by week. Columns sum to fewer than signups because reddit, Product Hunt and YouTube are not shown. activated is a subset of that week's signups, not a separate cohort.

TOP CITIES

CITY	STATE	SIGNUPS	PCT
Mumbai	Maharashtra	339	15.8
Delhi	Delhi	227	10.6
Bengaluru	Karnataka	215	10
Pune	Maharashtra	148	6.9
Hyderabad	Telangana	144	6.7
Chennai	Tamil Nadu	117	5.4
Ahmedabad	Gujarat	109	5.1
Kolkata	West Bengal	96	4.5
Jaipur	Rajasthan	67	3.1

ACQUISITION CHANNEL

organic		572
twitter		458
linkedin		306
whatsapp		254
referral		175
reddit		172
producthunt		118
youtube		93

Where and how. The city column is the long tail deliberately — 36 cities, with the metros at roughly half. Channel counts are all-time, not per week.

02 Securities data rendered

```
SELECT 'Securities data rendered' AS metric,
COUNT(DISTINCT symbol) AS value,
COUNT(*) AS render_events,
COUNT(DISTINCT exchange) AS exchanges,
COUNT(DISTINCT sector) AS sectors,
COUNT(DISTINCT user_id) AS users_served,
ROUND(AVG(render_ms)) AS avg_ms
FROM demo_security_render;
```

This metric is breadth, not volume. **value** counts DISTINCT securities put in front of somebody; **render_events** is the raw activity behind it. Every symbol resolves to a real listed instrument.

METRIC	VALUE	RENDER_EVENTS	EXCHANGES	SECTORS	USERS_SERVED	AVG_MS
Securities data rendered	4,459	18,420	3	12	855	545

COVERAGE BY EXCHANGE

NSE		2,283
BSE		2,045
NSE_SME		131

EXCHANGE	SECURITIES	RENDER_EVENTS
NSE	2,283	13,117
BSE	2,045	5,091
NSE_SME	131	212

RENDERS BY SURFACE

chart		8,530
company page		4,311
screener		3,183
chat card		2,396

INTERVAL	RENDERS
1d	7,400
5m	3,985
1h	2,983
15m	2,248
1w	1,804

Left — how much of each exchange was covered. Right — which product surface did the rendering, and on which timeframe. NSE_SME is thin by design: small-cap SME lines carry little chart interest.

SECTOR COVERAGE

SECTOR	SECURITIES	RENDERS	USERS
Unclassified	894	4,281	846
Financial Services	465	3,125	824
Consumer Cyclical	702	2,424	816
Technology	277	1,933	763
Industrials	702	1,933	782
Basic Materials	553	1,158	627
Consumer Defensive	302	1,068	613
Energy	44	1,002	587
Communication Services	100	633	441
Healthcare	230	499	369
Real Estate	152	281	230
Utilities	38	83	79

Sectors come from the enrichment join and are matched on company NAME. **Unclassified** is the unmatched remainder — those securities are real, only their sector is unknown.

MOST-VIEWED SECURITIES

SYMBOL	COMPANY	SECTOR	EXCHANGE	RENDERS	USERS
TITAN	Titan Company Limited	Consumer Cyclical	NSE	494	370
RELIANCE	Reliance Industries Limited	Energy	NSE	475	369
MARUTI	Maruti Suzuki India Limited	Consumer Cyclical	NSE	472	350
LT	Larsen & Toubro Limited	Industrials	NSE	471	367
ITC	ITC Limited	Unclassified	NSE	464	363
AXISBANK	Axis Bank Limited	Financial Services	NSE	458	350
WIPRO	Wipro Limited	Technology	NSE	448	341
INFY	Infosys Limited	Technology	NSE	447	349
ADANI	Adani Enterprises Limited	Energy	NSE	437	344
BAJFINANCE	Bajaj Finance Limited	Financial Services	NSE	436	335

renders exceeds users on every row: people return to the same name. The head is large-cap NSE, which is where retail attention actually sits.

03 AI chat sessions

SELECT 'AI chat sessions'	AS metric,
COUNT(*)	AS value,
COUNT(DISTINCT user_id)	AS users,
SUM(turns)	AS total_turns,
ROUND(AVG(turns), 2)	AS avg_turns,
SUM(tools_used)	AS tool_calls,
ROUND(AVG(latency_ms) / 1000.0, 1)	AS avg_sec
FROM demo_chat_session;	

A session is a conversation, not a message. total_turns counts the question-and-answer pairs inside them, and tool_calls the chart tools those turns invoked — the chat reads the chart rather than talking about it.

METRIC	VALUE	USERS	TOTAL_TURNS	AVG_TURNS	TOOL_CALLS	AVG_SEC
AI chat sessions	536	394	1,561	2.91	3,156	18.5

WHAT PEOPLE ASKED FOR

indicators		75
compare		46
alerts		46
levels		45
volatility		39
drawing		37
backtest		37
patterns		36
volume		35
explain		34

SESSION SHAPE

TOPIC	SESSIONS	TURNS	AVG_TURNS	AVG_SEC
indicators	75	234	3.1	18.9
compare	46	114	2.5	18.2
alerts	46	129	2.8	18.9
levels	45	143	3.2	19
volatility	39	103	2.6	17.5
drawing	37	103	2.8	17.8
backtest	37	128	3.5	18.4
patterns	36	112	3.1	17.4
volume	35	98	2.8	19
explain	34	89	2.6	19.2

Topic is what the first question asked for, classified at write time. Indicators lead; backtests run longest per session, which is the pattern you would expect.

Funnel

registered		2,148
activated		907
viewed a security		855
used the chat		394

STAGE	USERS
registered	2,148
activated	907
viewed a security	855
used the chat	394

Each stage is a strict subset of the one above. The gap between activated and viewed is the accounts that signed in and left without opening a chart.

Tables

DEMO_WAITLIST

ID	FULL_NAME	EMAIL	CITY	STATE	SOURCE	EXPERIENCE	ACTIVATED	REGISTERED_AT
1	Dhruv Rane	dhruvrane@gmail.com	Bengaluru	Karnataka	organic	1-3 years	1	2026-08-04 07:38:55
2	Sourav Mondal	sourav.mondal@outlook.com	Chennai	Tamil Nadu	reddit	3-7 years	0	2026-08-18 04:49:15
3	Prasenjit Paul	prasenjitpaul@gmail.com	Pune	Maharashtra	twitter	7+ years	0	2026-07-31 07:10:48
4	Dhruv Rane	dhruv55@icloud.com	Mumbai	Maharashtra	youtube	1-3 years	0	2026-08-15 17:33:01
5	Aditi Saxena	aditi39@outlook.com	Coimbatore	Tamil Nadu	twitter	7+ years	1	2026-08-22 16:49:26
6	Rohit Arora	rohitarora@gmail.com	Delhi	Delhi	organic	1-3 years	0	2026-08-24 17:08:54

One row per registration. activated the flag every activity table joins against.

DEMO_SECURITY_RENDER

ID	USER_ID	SYMBOL	COMPANY	SECTOR	EXCHANGE	SURFACE	INTERVAL	RENDER_MS
1	356	NCCBLUE	NCC Bluewater Products Ltd.	Unclassified	BSE	company page	15m	66
2	1,183	TCS	Tata Consultancy Services Limited	Technology	NSE	chart	1d	1,025
3	1,665	AXISBANK	Axis Bank Limited	Financial Services	NSE	chart	1d	550
4	250	KALAMANDIR	Sai Silks (Kalamandir) Limited	Consumer Cyclical	NSE	screener	1w	560
5	1,479	HIPOLIN	Hipolin Ltd.	Consumer Defensive	BSE	chart	1d	73
6	1,329	AXISBANK	Axis Bank Limited	Financial Services	NSE	chart	1d	959

- One row per render. **user_id** is a foreign key into the table above; no render can predate the registration it belongs to.

DEMO_CHAT_SESSION

ID	USER_ID	CHAT_ID	TITLE	SYMBOLS	TOPIC	TURNS	TOOLS_USED
1	1,694	c_20260826_00001	why did BNRSEC move like that	BNRSEC	explain	2	4
2	1,696	c_20260826_00002	draw a trendline on SMLT	SMLT	drawing	2	2
3	2,011	c_20260826_00003	why did ADANIENT move like that	ADANIENT	explain	3	9
4	1,291	c_20260826_00004	show me RSI and MACD on INFY	INFY	indicators	1	1
5	1,032	c_20260826_00005	is TCS overbought right now	TCS	indicators	4	12
6	891	c_20260826_00006	compare RELIANCE with its sector	RELIANCE	compare	4	8

- One row per session; the turns live in **demo_chat_message**, keyed by session and sequence.

TBL	ROW_COUNT	HOLDS
demo_waitlist	2,148	one row per registration
demo_security_render	18,420	one row per securities-data render
demo_chat_session	536	one row per AI chat session
demo_chat_message	3,122	the turns inside those sessions

The whole schema. Four tables, one file. Every figure in this document is a COUNT, SUM or AVG over one of them.

```
python3 make_report.py
```
